

TO BSR ASSOCIATES AND FRIENDS;

IT IS AN ORNITHOLOGICAL FACT

THAT ROBINS HAVE BILLS ---(Even as U & I)

It is a fact - of some kind - that Round Robin has bills, and though "round" is not plump, but somewhat lean and under-nourished. It is a fact of record or going to be, that if you-all cannot help RR in this 'mergency, he, it or she is going to hop the twig, to use a remembered phrase.

This doesn't happen every day. I think only twice before in about ten years -- which is not too bad for a non-profit, non-sectarian publication with no paid advertising and no axe-to-grind. But for nearly three months past BSR Hdqrs, have not received even a maintenance fund - and this is now a serious deficit. We cannot continue RR publication without financial help.

We heard about an editor-publisher, who heard about another ed-pub., who bragged about knowing a third one, who claimed that when he wanted an extra thousand or so all he had to do was to mention the matter and then wait for the postman, who was never late.

Ah caint hardly believe all that, but that \$1,000 reminds me that it's almost the amount we need right now; and if it were divided between (say) 500 Associates or even 250 the share per piecem would be real small.

Of course, I wouldn't go around giving hints. Not to nobody. I don't like people who give hints - but giving donations is different somehow. No one needs to remind me, too, that we have some wonderfully fine people on our list of Associates, who have been generous beyond their share.

ML

*****P.S. But IF YOU SHOULD GET ANY IDEAS from the foregoing paragraphs, just mark your check or memo. as a gift, or donation, or as "Released."

*****P.P.S. Who was it wanted to know about the meaning of "a lac of rupees?" It's Hindu-Scotch with the K lost of the lack and describes the BSR finances.

ml

(A hot or at least warm news item, just in. The Miami Herald says the Air Force has an infra-red camera that will photograph (say) your car where you left it but where it isn't now - if you follow me(?!:-?). BSR has been expecting some such slippery trick as this. Page the Delawarr laboratories, but don't try to explain everything by residual heat; the lab people know better than that 10 yrs. ago.
.....Thanks to T.U. Moore, 1412 Murray Dr., Los Angeles 26.
